Yi2

Pattrolgical Lectures on the figure of Diseases Il' Maving Considered the natural States of the pulse, and its deviations from it in persons in apparent health, and the circumstances which impair or destroy the hympsathy of the heart and arteries in Diseases, we proceed now to inquire vito its deviationes from healthe & order in Sichness. I It departs from order in fuguen = cy de griehnes. By frequency is ment the munder of flooties =

= Tholes which the pulse beats in a given time - viz in a minute. By gricknep is meant the greater on : less time in which each pulse is parformed a pulse may be quich without being without being very Juguent. It was often lo in the yellow fiver of 1793. The pulse in some diseases vises from 60, or 70 ups to 180 de 200, and in its defect of frequency falls to ho. 30.20. 9. and I have testing heard of a case of apoplery in which it fell to 7. Its frequen = cy to is occasioned by morbid

initability in the blow repels. It occurs chiefly for the last stage of Jeners. Its morbid Blowness depents upon three Capeses. I prepure on the brain - hence we find it in apoplery, & Thronouphalus interners. 2 a Spasm in the heart, K3 a defect of instability in the asteries, inexceptive minimate, on
exceptive of contagions
untagion,
on other stimule acting upon them. The pulsations in this flow Joulse are generally ignal, but there is an intermitting pulse; In this case, there are pauses three ftrohes. It occurs in all age.

The pulse diparts from order, or its healthy actions in respect to force & rigilarity. The potos imparts in this case a fensation like justing to the jungers. I shall briefly its diviations from health as they occur in that discase in which it if is chiefly relied upon to regulate our knowledge beforestier, J. mean fever.

pulses. The first is known by two Strokes successing by one or two regular or slow strokes - I have called it ahop. is one pulse rising over another for three Successive Strokes, like the waves of the Sea. + Thus have I immerated the most common States of the pulse in burer. But there are morbid States of the pulse in which there is an absence of facinion in which but little jener attends. - This state of the pulse occurs in the Paly, Dropsy Ochophy, and some other disconditions. In the Pulsy, the pulse is full I bounding, but often tense. It is generally fullest in the affected fide.

V full & soft in balsy, also in Jonesmoniga notha. In this case, There is affirsion only in the parts affected, with out any inflam: action. H heatness & promency are generally convected in the pulse. here we find a fuguent pulse in the close of all discous which have worm out the thought of the hystern we find it likewise after howombages. This remark extends to Other arimals. The fines is quick in propo west of them in proportion as they are weak, & stoney slow in propos. - how as they are strong. Thus in a Joingeon it is above 400. In a dog about go in a sample in horse 36 to 38 from 36 to 38 fine a horse 34. Jell in onenjan.

It is full & bounding likewise in the tomic state of Dropping. But it is sometimes 2 There is a weak, low pulse without any inegular action or Jisk in it. This pulse occurs in cases of mere Debility without former, or sworbid ex. -citement in any of the System. It is the usual pulse of low mesus Assessed Appose on dia late of the hours the lystern of the debility which prove the lystern of fiver, and Tucceds to termination with his fire of multignant fiver, and much grant from, hy occurring in the close of diseases. or on 3 There is the minimatribule. It is full-tend & jours the fringer a finish in parted in friends to the fringer to the finish to th add that there is Comitimes an

V In have only to add upon the morbid flater of the pulse that in speaking of the relative force it is a good practice to divide it into tur grades - that is 5 natural force in ordinary health, By this means we may convey to own patients intelligible idens of the Tiere ase nof the four of the pulse, and the greates or less changer converted with them, say with a synochus fortis puber, with a synochus fortis puber, with a subject of a patricult was son supported puber. I would vay its force was son above of though it be reduced to synochula. I wo - 20y 3 - 26 to privation 2 - 26 to typhod one - If on the Courtnery it fell below O, I w? call typhins i below to its quater or less dique of weekness.

Absence of pulse in acute poeaus for hours, and even days, and without the extinction of life / It occurs chiefly in Stomach I live of complaints. I once senew it albrent for 36 hours in a Lady in this fity who was disast from cating 5 hard roundly has beath.
